

The **Missing Link**
in EPC

If building a Solar installation is your dream, not only to generate power, but move to the forefront of Energy Revolution. Your question will be “How to do it?” & “Who can help?”

There are many aspects that can derail a Solar Project.

Factors such as:

- Government notifications
- EB understanding & Support
- Design Schedule
- Quality Material
- Final construction

The above issues, if not addressed can all attribute to a poorly run project that will end up making you **wish you have never started.**

What kind of a company can help from the start of the Project?

This may be an option where engineer, procure, construct (EPC) company can step in and come to your rescue.

We would be honored to hear from you.

Regards,

H.Nandi

Managing Director

"SOLAR SOLUTIONS "
is just not our business, but it is
our responsibility towards
our Society and the Environment .

Benchmark

of EPC conducted by us recently:

Aethon Site

Firmly Fixed Panels

Panels held in position by clamps

Cat-walk provided for safety and maintenance

Perfectly aligned panels

Competitor Site

Panels not fixed to any structure

Panels Sliding down from original position

People walking on the existing roof

Misaligned Panels

Aethon Site

Well enclosed wiring in DC Cable tray

AC Cable trays provided to walk on, as well as prevent wiring from being damaged

Lightening Arrestor (ESE type) Covering 105 mtrs radius

Panels are cleaned using Pressurized pump with GI pipe

Competitor Site

Exposed wiring will get damaged and is also dangerous

No Cable tray provided! Cables enclosed in PVC Pipes

Spike Arrestor covering only 5 mtrs radius

Small sprinklers are used which leads to poor panel cleaning

We are one of the best Solar EPC company in India. We consider it as our corporate responsibility to spread the message that Solar Project is sustainable and is ECO friendly.

That is why we have a bank of signature accounts!
